

# E-Cigarettes & Vape Pens Components

## Battery

The battery is the energy source of the device and powers the atomizer

## Atomizer

The atomizer is the heating element that heats the e-liquid and is often coil shaped

## E-Liquid

Sometimes called e-juice, this is put into the device and often contains flavors and nicotine

## Cartridge

The cartridge (tank) holds the e-liquid and may also hold the atomizer

## Aerosol

Heating e-liquid inside the device creates an aerosol that is inhaled into the body and out into the air
